

Suraj Kumar Lohani — Fractional CFO

Finance Management, Costing & Budgeting, MIS & Reporting, Business Automation

Excel, Power BI, AI, Python, SQL, n8n | 22+ Years in Finance & FP&A

COMPANY PROFILE — 2026

Ghaziabad, Delhi NCR, India | Serving India · UAE · UK · Singapore · Australia · Saudi Arabia · Netherlands

Who We Are

A Fractional CFO practice for inventory-driven product businesses — closing the gap between the data a business already has and the visibility its founder actually needs to make today's decision.

The work runs on one non-negotiable rule: **Data First. AI Second.** Every number is verified before any AI touches it, because a wrong number delivered fast is still wrong. This is a finance practice first, and an automation practice second — not the other way around.

We work as a strategic partner to CEOs, directors, owners and founders — not a vendor that delivers a report and moves on, but a partner who sits with the business long enough to see what the numbers are actually trying to say.

The Numbers So Far

Paid Book + Free Resources

Two Layers, One System

Strategy Layer — Financial Diagnostic & Control Architecture: the work that finds money before a single rupee of fraud is even in question. Broken reorder cycles, ageing stock, mispriced contracts, working capital trapped in the day-to-day.

The Last Layer Approach™ — Most finance audits stop at the P&L, the trial balance, the system record. The Last Layer Approach™ goes further — to the warehouse floor, the security guard, the delivery rider, the office boy who physically handled the document. Fraud does not live in boardrooms; it lives in the gap between what the system records and what the last layer knows.

How the Engagement Is Structured

- **Financial Diagnostic & System Mapping** — one-time. Finds what's leaking, maps where scattered data actually lives.
- **Financial Control Architecture Design** — building the structure that closes the gaps the diagnostic found.
- **Automation & Visibility Implementation** — consolidating scattered data into a single source of truth, with an MIS one-pager built into the regular reporting cadence: Cash Position, Cash vs Profit, Variance Flags, Inventory, Working Capital, Today's Decisions.
- **Fractional / Virtual / Interim CFO** — senior finance leadership for strategic decisions, investor conversations and board presentations, without a full-time hire.

Who We Serve

Inventory-driven product companies across FMCG, D2C/Retail/E-Commerce, Manufacturing, Trading & Distribution, Services, Real Estate, FOCO, COCO and Franchise operations — currently across India, UAE, United Kingdom, Singapore, Australia, Saudi Arabia and the Netherlands.

For Startups — Building the finance function from zero: basic MIS and cash visibility from day one, investor-ready numbers before they're asked for, right-sized controls that don't slow the business down.

For Established Companies — Fixing what scale already broke: diagnostic first, automation layered onto existing ERP without a rip-and-replace, and a fraud/leakage review using the Last Layer Approach™.

Who Builds This, Every Single Day

Suraj Kumar Lohani — Fractional CFO | Finance Management, Costing & Budgeting, MIS & Reporting | Business Automation (Excel, Power BI, AI, Python, SQL, n8n) | 22+ Years in Finance & FP&A.

Author of *Excel for Finance and Accounting*, plus 9 free resources. Strategic partner to CEOs, directors, owners and founders across seven countries — with ₹200Cr+ (\$20M+) saved and variance corrected, including ₹40–50Cr+ (\$4–5M+) in fraud and leakage caught, across engagements since 2009.

Shikha Kutariyar Lohani — Partner · Excel & Power BI Developer.

MIS, dynamic dashboards and data analytics. AI workflow automation, SOP and process design, business operations analysis. Bihar Engineering University, Patna. Builds the reporting and automation layer that keeps every client engagement running on clean, current data.

Proof, Not Promises

- **₹12L** — A contract mispricing clause caught and corrected before signature at a ₹300Cr export manufacturing company.
- **₹28L** — Working capital released by fixing a broken reorder and ageing-stock cycle in a fast-growing D2C business.
- **₹37L** — Returns fraud surfaced on a marketplace portal through margin-leakage pattern detection; ₹1.25 crore admitted diverted over three years.

Anonymized. No ledger screenshots, no ERP screens, no identifiable SKU data — authority here means integrity, not secrecy.
